## **IPRS**

# **Integrated Payment** and Reporting System

## 835 Reporting Specifications

Version 1.8

January 2004

#### **Electronic Remittance Advice-835 Transaction Set**

The Electronic Remittance Advice (ERA ASC X12N 835) is a computer-generated document which provides the billing provider specific remittance advice information of all claims submitted to MMIS+, along with a detailed breakdown of payment. The ERA is produced and transmitted to the billing provider upon completion of the Medicaid and IPRS claims processing cycles at the same time that checks or electronic funds transfers are generated.

### **Claims Filing - Overview of User Tasks**

The Integrated Payment and Reporting System (IPRS) is a claims processing system that will pay Division of MH/DD/SA (DMH) funds for claims submitted by billing providers enrolled in IPRS. The IPRS replaces volume of service reporting for Pioneer, At-Risk Children and MRMI UCR systems. The Medicaid Management Information System (MMIS) is a claims processing system that pays Division of Medical Assistance (DMA) funds for claims submitted by billing providers enrolled in MMIS. IPRS together with the MMIS comprise the MMIS+.

Area programs are enrolled as billing providers in both IPRS and MMIS. Claims are sent by area programs to the MMIS+ in the same format for both IPRS and MMIS. The MMIS+ system determines the 'best payer' based on information on the claim.

EDS is the fiscal agent that operates the MMIS+. Claims are submitted to EDS for processing.

Below is the process used to submit claims to MMIS+:

#### Enter billable activity into local client accounting system.

Each billing provider enters records of services provided in their local client accounting system. The local client accounting system stores the service activity records, and submits billable activities to 'Payers'. Medicaid and DMH are designated as payers in the local client accounting systems.

#### New claims are submitted to MMIS+ in an electronic format.

The local client accounting system stores and submits a group (batch) of claims. For MMIS+, claims are submitted in an Electronic Format that is consistent with a national standard called ANSI X12N 837. This is the standard required by HIPAA. The client accounting system generates a file in the 837 format, and the computer administrator transmits that file to an EDS electronic mailbox. Claims can be submitted daily.

#### Review the Electronic Acknowledgement for files submitted electronically.

After an 837 file is transmitted to the EDS mailbox, two files will be generated to acknowledge the receipt of the transactions and report certain types of problems in the transaction set. These files should be reviewed by the sender.

#### Adjustment claims, and Medicaid claims with Third Party Liability, are mailed to EDS.

Certain types of claim activity must be done using hard copy claims and attachments. This includes adjustment claims, and Medicaid claims when the recipient has other third party coverage.

On Fridays, the MMIS+ performs claims payment processing (a "Checkwrite cycle").

Generally, checkwrite cycles are run the 1<sup>st</sup>, 2<sup>nd</sup> and 3<sup>rd</sup> Fridays of each month. A schedule is published annually and distributed to billing providers. Claims that were submitted since the previous checkwrite cycle are routed to the best payer, assigned an Internal Claim Number (ICN) and processed. Some claims that were partially processed during previous cycles may also be re-processed, such as suspended claims, deny-re-enter claims, and system generated claims for retroactive Medicaid eligibility or retroactive rate revisions.

#### Download the Electronic Remittance Advice files.

After each checkwrite cycle, billing providers must access their EDS electronic mailbox and download the Electronic Remittance Advice files. There will be two different files. The first is the Remittance Advice in ANSI X12N 835 format that contains information on paid and denied claims and the second is the ANSI X12N 277 format that contains information on suspended claims.

#### Use local software to process remittance files.

Your local system must have software to view and print the electronic RA. Your local software may provide you with the capability to post paid claims to your client accounting system.

#### An Electronic Remittance Advice Financial Summary will be produced.

This will report the payment amount, as well as any uncollected receivable amounts (debt).

#### An Electronic Funds Transfer will be made to the billing provider.

The fiscal agent will transfer payments for both DMA and DMH in separate funds transfers.

#### 835 Business Use and Definition

The ASC X12N 835 is intended to meet the particular needs of the health care industry for the payment of claims and transfer of remittance information. The 835 can be used to make a payment and send an Explanation of Benefits (EOB) remittance advice from a health care payer to a health care provider.

#### Payment

Note @

In all instances, "payee" refers to the billing providers. Likewise, "payer" refers to the actual payer, DMH or DMA.

The 835 contains information about the payee, the payer, the amount, and any identifying information of the payment. One 835 transaction set reflects a single payment device. In other words, one 835 corresponds to one check or one EFT payment. Multiple claims can be referenced within one 835.

#### Data Use

The 835 is divided into three levels, or tables.

- The Header level, Table 1, contains general payment information, such as amount, payee, payer, trace number, and payment method.
- The Detail level, Table 2, contains the Explanation of Benefits (EOB) information related to adjudicated claims and services.
- The Summary level, Table 3, contains the Provider Level Adjustment Segment, PLB, which provides information related to adjustments to the payment amount not specific to Table 2 claims. These adjustments can either increase or decrease the actual payment with respect to the Table 2 claim charges.

Note @

The 835 is used to transmit payment and data needed for posting by a provider subsequent to the adjudication of a claim. Non-adjudicated claim information is carried in the ASC X12N Health Care Claim Status Notification Transaction Set (277).

## \*835 Transaction Summary

Loop/Segment	Comment
	A. TRANSMISSION HEADER
ISA Interchange Control Header	Deported 1 time per transaction act
ISA Interchange Control Header	Repeated 1 time per transaction set
GS Functional Group Header	
ST TRANSACTION SET HEADER	
BPR Beginning Segment for Payment Order/Remittance Advice	
TRN Reassociation Trace Number	
Receiver Identification (Situational)	Clearing House Identification Segment – Medicaid Only
Production Date	
Loop 1000A – Payer Identification	
Payer Address	Address information will differ between DMA and DMH
Loop 1000B Payee Identification	
Payee Address	
Payee, City, State, Zip Code	
Payee Additional Identification	
	B. SUBMITTED BILLING PROVIDER
Loop 2000 - Submitted Billing Provider- Repeated for	Repeat for each different billing provider for the same base billing
"subsidiary providers" multiple billing provider numbers	provider in the 835 transaction set, incrementing LX count for each
associated with same base billing provider	additional billing provider. (Example- Claims are processed for
	providers with different alpha suffixes, but the same base provider
	number)
Provider Summary Information	Submitted Billing Provider ID Transaction Statistics
	C. CLAIM PAYMENT INFORMATION
Loop 2100 - Claim Payment Information (Header Claim)	Repeat for each Claim for Submitted Billing Provider in Loop 2000.
CAS- Header Claim Adjustment (Situational)	Created only when the sum of the details is not equal to the Header Billed amount
Patient Name	Repeat once for each Claim in Loop 2000.
Service Provider Name	Situational

Loop/Segment	Comment
Corrected Priority Payer (Situational)	Medicaid Only
Outpatient Adjudication Information (Situational)	Medicaid Only
Other Claim Related Identification Claim Payment	1 <sup>st</sup> Occurrence – Medical Record Number
Information	2 <sup>nd</sup> Occurrence – CNDS Base ID for client
Claim Date (From)	
Claim Date (To)	
Claim Supplemental Information Quantity –	NO LONGER PRESENT UNDER HIPAA COMPLIANCY
(Situational)	
	D. SERVICE PAYMENT INFORMATION
Loop 2110 – Service payment information	Repeats for each service detail on the claim in Loop 2000.
Service Date-From	
Service Date-To	
CAS Service Adjustment (Situational)	Repeat for each service level adjustment for Service in Loop 2110 -
	when charged and paid amounts are not equal in SVC
Service Identification	Repeats once for each service detail in Loop 2110
Reference Identification	
Supplemental Amount (Situational)	Medicaid Only
Supplemental Quantity (Situational)	Medicaid Only
Health Care Remark Codes (Situational)	Repeats for each Remark Code generated by Payment System for
	Service in Loop 2110 - reports service level error codes
	E. PROVIDER LEVEL ADJUSTMENT
Provider Adjustment (Situational)	Occurs as many times as necessary, associated with Loop 1000B Payee - used to report adjustments that are not specific to a particular claim or to report provider accounts payable entries
	F. TRANSACTION TRAILER
Transaction Set Trailer	Must match ST
Functional Group Trailer	Must match GT and ISA
Interchange Control Trailer	
	·

## **Balancing**

The amounts reported in the 835, if present, must balance at three different levels: the service line, the claim, and the transaction. Adjustments within the 835, through use of the Claim Adjustment and Service Adjustment Segments, CAS, or Provider Adjustment Segments, PLB, decrease the payment when the adjustment amount is positive, and increase the payment when the adjustment amount is negative.

#### **Service Line Balancing**

Although the service payment information is optional, it is required for all professional claims or anytime payment adjustments are related to specific line items from the original submitted claim. When used, the submitted service charge minus the sum of all monetary adjustments must equal the amount paid for this service line.

#### Example:

Amount 1 - Amount 2 = Amount 3 Where:

Amount 1 — transmitted in the Service Payment Information Segment, SVC02 - is the submitted charge for this service.

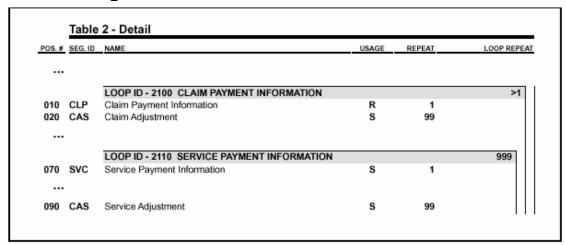

Amount 2 — transmitted in the Service Adjustment Segment, the sum of CAS03, 06, 09, 12, 15, and 18 — is the monetary adjustment amount applied to this service.

Amount 3 — transmitted in the Service Payment Information Segment, SVC03 — is the paid amount for this service.

#### Special Considerations

- Adjustments within CAS decrease the payment when the adjustment amount is positive, and increase the payment when the adjustment amount is negative.
- Providing service detail is critical for business, especially when professional or fee-based services are involved.
- If any service detail is reported in the claim payment, all services for the claim payment should be reported.

#### **Claim Balancing**

Balancing must occur within each Claim Payment loop so that the submitted charges for the claim minus the sum of all monetary adjustments equals the claim paid amount.

When the Service Payment Information loop is present, the following formula applies:

#### **Example:**

Amount 4 - Amount 5 = Amount 6 Where:

Amount 4 — transmitted in the Claim Payment Segment, CLP03 — is the total submitted charge for the claim.

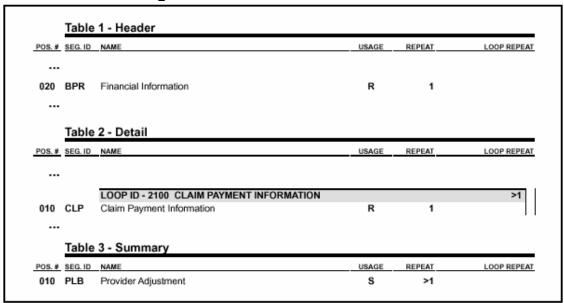

Amount 5 — transmitted in the Claim Adjustment Segment and/or Service Adjustment Segment, the sum of CAS03, 06, 09, 12, 15, and 18 — is the monetary adjustment amount applied to this claim.

Amount 6 — transmitted in the Claim Payment Segment, CLP04 — is the paid amount for this claim.

#### Special Considerations

 Adjustments within the Claim Adjustment or Service Adjustment Segments decrease the payment when the adjustment amount is positive and increase the payment when the adjustment amount is negative.

#### **Transaction Balancing**

Within the transaction, the sum of all claim payments minus the sum of all provider level adjustments equals the total payment amount.

#### **Example:**

Amount 7 - Amount 8 = Amount 9 Where:

Amount 7 — the sum of all CLP04 amounts transmitted in the Claim Payment Segment — is the total of all claim amounts included in this transaction set.

Amount 8 — the sum of PLB04, 06, 08, 10, 12, and 14 transmitted in the Provider Adjustments Segment — is the provider level adjustment made to the claim payment.

Amount 9 — transmitted in the Financial Information Segment, BPR02 — is the total payment amount of this claim payment.

#### Special Considerations

 A positive amount in PLB indicates a decrease in the payment amount. A negative amount in PLB indicates an increase in the payment amount.

#### **Remittance Tracking**

POS.#	SEG. ID	NAME	USAGE	REPEAT	LOOP REPEAT
040	TRN	Reassociation Trace Number	R	1	

The Reassociation Key Segment, TRN, contains a trace number for the transaction set. Trace Number, TRN02, which is used to reassociate payments and remittances sent separately, should be a unique number.

- For check payments, TRN02 is the check number.
- For Electronic Funds Transfer (EFT) payments, TRN02 is the unique number assigned by the payer to identify this EFT.
- For non-payment transactions, TRN02 is a unique number generated by the transaction set originator as that 835's identification number (e.g., a control number plus a suffix).

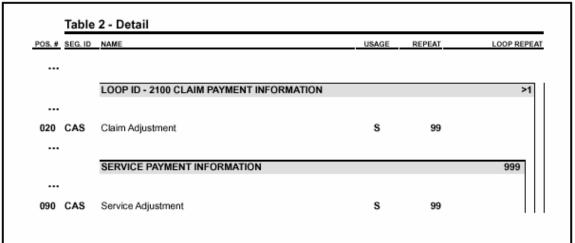

In addition, TRN03 is the payer's identification number. TRN03 allows the payee to avoid matching problems in case multiple payers use the same number in TRN02.

#### Reassociation of Dollars and Data

The 835 is capable of sending health care claim payment remittance data with or without the dollars represented by the data. It is important to facilitate re-association when the remittance data is sent separately from the monetary amounts. Re-association requires that both remittance and monetary data contain information that allows a system to match the items received. The billing provider along with their software vendor should have a method to ensure that payment and remittance advice is reconciled in the patient accounting/accounts receivable system.

835	Description	837
2300 Loop REF02	Detail Line Item Control Number	2400 Loop REF02
2100 Loop CLP01	Internal Patient Account Number	2100 Loop CLM01
TRN02	Links ERA to EFT amount	N/A

#### **Claim Adjustment and Service Adjustment**

The Claim Adjustment and Service Adjustment Segments provide the reasons, amounts, and quantities of any adjustments that the payer made either to the original submitted charge or to the units related to the claim or service(s). The summation of the adjustments at the claim and service levels is the total adjustment for the entire claim. Service level adjustments are not repeated at the claim level.

Under HIPAA guidelines a standardized list of claim adjustment reason codes is used in the Claim Adjustment and Service Adjustment Segments. IPRS will continue to use the ESC and EOB codes similar to those currently used by Medicaid. These codes can be found in this manual, Section 4g: ESC/EOB codes, or on screen through Report2Web. These codes provide the "explanation" for the positive or negative financial adjustments specific to particular claims or services that are referenced in the transmitted 835. Other financial adjustments can be expressed in the Provider Adjustments Segment; however, the claim adjustment reason code list is not used for provider level adjustments.

The Claim Adjustment Group Code, CAS01, categorizes the adjustment reason codes that are contained in a particular CAS.

At either position — the claim level or the service level — each CAS can report up to six different adjustments related to a particular Claim Adjustment Group. This can be seen by noting the reoccurrence of the Claim Adjustment Reason, Monetary Amount, and Quantity data elements, referred to as "an adjustment trio," in the CAS. There is no specific order to any particular kind of adjustment and an adjustment data element trio. For example, a co-insurance adjustment does not belong at any specific position in the segment. The assumption is that no adjustment trio is used if no meaningful data is included. The first adjustment is placed at the first trio — CAS02, 03, and 04.

If the trio is blank, no adjustments will follow.

#### **Electronic Fund Transfers**

All payments made to IPRS billing providers will be made using Electronic Funds Transfers. During the Pilot test, the DHHS Controllers Office will make the payments to the two area program pilot sites, based on payment information provided after each checkwrite cycle.

After the pilot development contract is over, and the contract for ongoing operations is in effect, the Fiscal Agent will make EFT payments to participating IPRS billing providers.

## **ERA Special Considerations**

#### Printing and Viewing the ERA

In the format that is received by billing providers, the Electronic RA is not easily readable. It consists of a series of complex 'segments' identified by three digit codes, with each piece of information imbedded between asterisks. It is a report not easily understood in the format that it is received.

It is the responsibility of each billing provider to convert the ERA into a printable/ viewable format. This can be accomplished with the assistance of the client accounting software vendor, the use of special e-commerce software packages called 'translators', or through the use of a clearinghouse.

#### Posting the ERA

One of the most significant potential benefits of an Electronic Remittance Advice is the ability to electronically post claims to the client accounting system. 'Keys' to link the claim to the local client accounting system are included on the electronic claim that is filed by the billing provider. These same 'keys' are included on the Electronic Remittance Advice, so that the client accounting system can post the payment to the correct item in the correct client's account.

It is the responsibility of the billing provider to develop the capability for electronically posting paid claims. This capability has to be built in to the client accounting system by the software vendor.

There are a number of special challenges presented by the MMIS+ with regard to electronic posting:

- When the claim is filed, the billing provider does not know whether the claim will be routed to Medicaid or IPRS.
- Since IPRS pays without regard to other first and third party payments, IPRS could pay an
  amount larger than the outstanding balance for a service event (client accounting system
  'open item'). The client accounting system will have to accommodate 'over-posting.'
- IPRS claims may take multiple cycles to fully process, due to the suspend and 'deny/re-enter' dispositions that will be assigned to claims under certain conditions.
- System generated claims for retroactive rate revisions and retroactive Medicaid eligibility may present problems for electronic posting.
